WE CAUGHT THEM! Part 5: In Competitive States, Once Biden Gained the Lead with MASSIVE Vote Dumps, The Remainder of Votes All Possessed Same Biden to Trump Vote Ratio – THIS IS INCONCEIVABLE!

We've reported on multiple incidents of 'glitches' that people were observing related to the reporting of the 2020 Presidential Election. These incidents seem odd and so we sought out a data set from the 2020 Presidential election and we found it. A group of IT patriots had already analyzed a data set of election vote data and found millions of votes in the election that were

either lost or transferred from President Trump to Joe Biden. We reported this and our post was retweeted by the President.

BREAKING EXCLUSIVE: Analysis of Election Night Data from All States Shows MILLIONS OF VOTES Either Switched from President Trump to Biden or Were Lost — Using Dominion and Other Systems

We've reported on numerous events in the 2020 election which are being referred to as system 'glitches' in the media. Last night we provided another 'glitch', this time in Wisconsin, which if reversed would eliminate Biden's reported vote lead in the state. Tonight we have obtained an unaudited analysis of data available for all the ... Continue reading

Then we uncovered patterns within the data that made no sense.

In Pennsylvania we identified a strange pattern between the vote percentages between President Trump's Election Day votes and his mail-in votes:

SHOCKING EXCLUSIVE: WE CAUGHT THEM! Pennsylvania Results Show a Statistically Impossible Pattern Behind Biden's Steal! WE CAUGHT THEM!

We caught them! We caught their fraud! And in this post tonight — OUR FIRST OF MANY — We will reveal how they stole the battleground states! The fix is in. The current results of the Presidential election in Pennsylvania reported to the public are fraudulent because they are nearly statistically impossible. On election night ... Continue reading

Then we reported on a pattern identified by Dr. Shiva from a few select counties in Michigan that were consistent but made no sense. Dr. Shiva using this approach identified 138,000 votes transferred from Trump to Biden:

WE CAUGHT THEM! Part 2: Email Inventor Dr. Shiva Finds SAME IMPOSSIBLE BALLOT RATIO Feature in Michigan Results – WE CAUGHT THEM!

We caught them! We caught their fraud! In our post on Friday night — OUR FIRST OF MANY — We revealed how they stole the battleground states! The fix was in. The current results of the Presidential election in Pennsylvania reported to the public are fraudulent because they are close to statistically impossible. On election … Continue reading

Then we used the same analysis used by Dr. Shiva on a data set from Milwaukee and found more votes transferred from President Trump to Biden.

WE CAUGHT THEM! Part 3: SAME IMPOSSIBLE BALLOT RATIO Found in Milwaukee – Results Change Wisconsin Election – 30,000 Votes Switched from President Trump to Biden

A deep dive into the results in Milwaukee shows a similar pattern The Gateway Pundit found in Pennsylvania and Dr. Shiva found in Michigan. The more Republican the precinct the higher percentage of votes shifted from President Trump to Joe Biden. We've also previously reported on the results from Milwaukee where the number of votes ... We then re-performed Dr. Shiva's work on one Michigan County and determined that we materially agreed with Dr. Shiva's result which provided proof that we were on the right track:

WE CAUGHT THEM! Part 4: We Were Able to Replicate SAME IMPOSSIBLE BALLOT RATIO Found in Michigan's Kent County As Reported by Dr. Shiva – 20,000 Votes Switched from Trump to Biden

A deep dive into the results in one Michigan County shows a similar pattern as was identified by Dr. Shiva in his Michigan analysis. Dr. Shiva's numbers can be replicated. Votes were transferred from President Trump to Joe Biden based on consistent rate of transfer. This is VERY IMPORTANT that this analysis can be replicated ... Continue reading

Now today we have identified another unusual pattern in vote reporting in at lease two states.

We have identified in at least two states that after large entries were made which provided for a lead for Joe Biden, all subsequent entries after that period of time had the exact same unusual ratio of Trump to Biden votes.

We reported last night that in Virginia in the election a number of large vote transactions or entries were recorded and reported in the voter data feed

used by multiple Big Data companies to keep tabs on the election. Then after these large entries were dropped, the ratio of Biden to Trump in most all the remaining data feeds was the exact same ratio.

> **BREAKING EXCLUSIVE: Multiple Reversals and Proportional Vote Entries In Virginia on Election Night after 11 PM Indicate Election Fraud Occurred in This State Too**

We noted the following:

Overall three entries of over 300,000 votes were posted in the data base to Biden's vote total. Two entries of over 300,000 votes were taken away. The same happened to President Trump's totals but in much smaller amounts. Overall 851,000 votes were added to Biden's totals and only 318,000 were awarded to President Trump between 11:14pm (Eastern) on November 3rd and 5:00am November 4th. This resulted in over half a million more votes net going to Biden and 73% of the votes during this timeframe.

What's really odd about these entries are the **huge negative entries**. One entry taking away 330,153.54 votes from Biden and 37,510.39 from Trump appears to have reversed an entry a few minutes that at around midnight. Then at 12:26 and 12:30am an entry in the amount of 308,341.59 from Biden and 80,357.05 from Trump was posted and reversed. The exact same

amounts. A few hours later another 230,000 votes net were added to Biden's lead.

These reversing entries look like adjusting entries. Anyone in the accounting profession is aware of entries posted in error that are reversed and replaced with the proper entries and amounts. Why the hell would Virginia need to make these types of entries in their voting system? **There really is no logical reason (except for fraud).**

After these entries noted above were recorded, **nearly every entry made into the system for the Presidential election had the same proportion of votes of Biden to Trump**. This too is not reasonable. There is nothing random about this. It is highly, highly unlikely that the results of all these entries would be at the same proportion. **This too indicates fraud.**

We also identified the exact same activity in Pennsylvania. On election night, Trump is up by 500,000 votes and leading 56%-42% with about 43% of the vote count in. Then Trump starts to get votes deducted increasing in frequency seemingly to keep the margin moving in Biden's direction little by little. Finally, a couple days later Biden flips to the lead with 90% of the vote counted and the margin is locked in for almost all subsequent incremental counts at a 50.051 to 49.949 ratio for Biden (See portion of entries below).

Again, it is completely INCONCEIVABLE mathematically and statistically that another 37 batches of votes after the switch in the lead to Biden would have exactly the same distribution to the candidates.

What is going on with the data and the votes recorded in the 2020 election? These patterns make no logical sense other than to assume fraud.
